MEMORANDUM for the NATIONAL SECURITY ADVISER

THRU : The DDG and Chief of Staff
: The ADG-GASO
FROM : Head, ICTD-TSS
SUBJECT : **RECOMMENDATION for the Supply and Delivery of Various ICT Equipment, and Productivity Software for the National Security Council**
DATE : 03 December 2019

This is to respectfully recommend to the National Security Adviser, the **Supply and Delivery of Various ICT Equipment, and Productivity Software for the National Security Council.**

Presently, the inventory of the ICT equipment is already lacking in support to the operations and productivity of the various units under the National Security Council. With the influx of new hires and expanded extensive operations, personnel are strained to share the limited number of ICT resources and productivity software.

The local area network (LAN) backbone is also being forced to accommodate more data and voice traffic. This also prompted the need to upgrade the network distribution switches.

Together with the higher volume of Internet traffic, the need for an improved anti-virus system is also recommended to be in place. This will augment the network safeties and securities that are already installed. It will improve protection by extending security to the endpoints.

For the NSA's information and consideration.
